A Revolution in Real Time  
Construction Management

# RUS2BILL

## A Revolution in Real Time Construction Management

**RUS2BILL** Supports Real Time monitoring of construction progress and daily management of redlines. With **RUS2BILL**, keep the back office off the backs of your field crews.

### Overview

This innovative software solution is meant to empower our clients by providing all around features in the form of a mobile and web application.

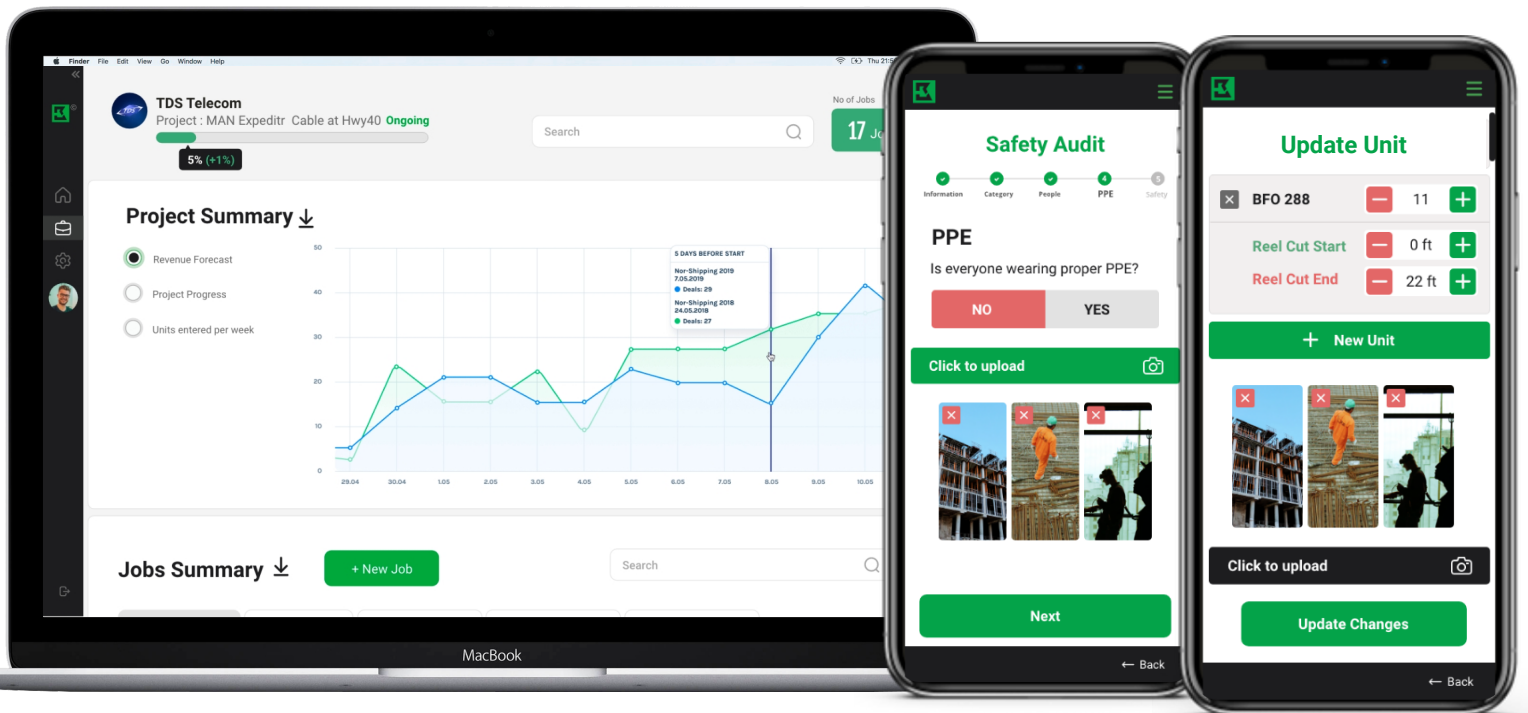

The application is easy to use and can capture information on the go by helping companies view the status of projects on a real time basis.

RUS2BILL eliminates all mundane activities in spreadsheets and phone calls and provides the right information required to manage efficiency in any utility construction project.

# What is RUS2BILL?

RUS2BILL is a web based “Software as a Service” tool that tracks real time construction progress. It empowers Rapid Invoicing of Construction Projects with improved accuracy through real time recording of Field Progress.

## RUS2BILL Supports The Pillars Of Utility Construction

### Admin users

Admin users are the back office, managing your projects.

### Field Users

Field Users are the front line. They report real time progress.

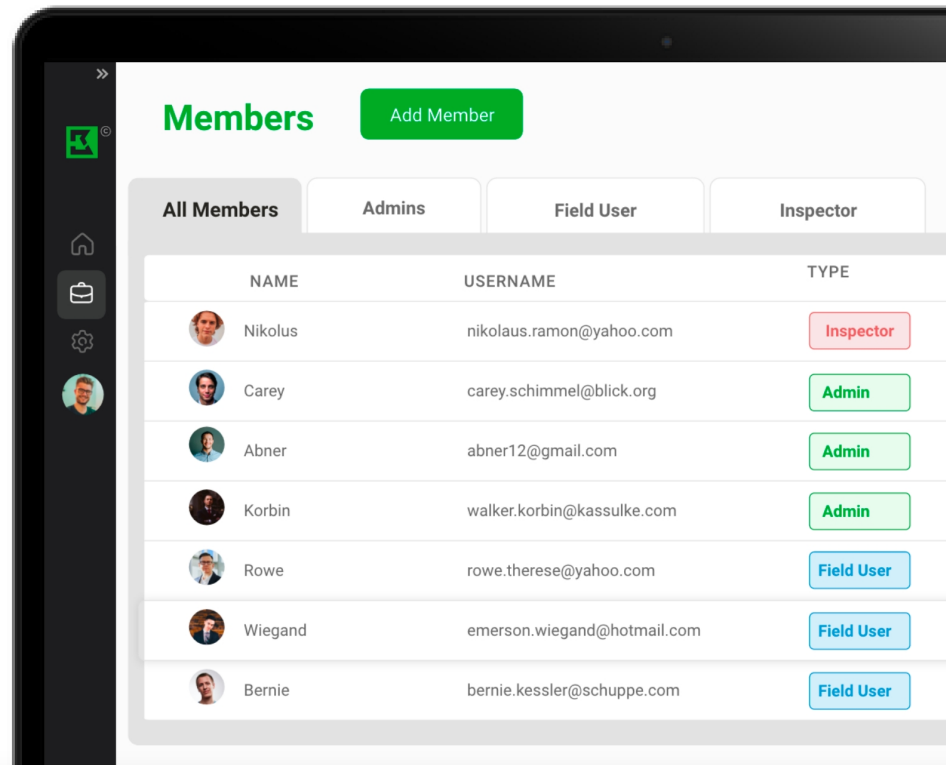

### Inspector

Inspectors protect your investment.

## Stay On The Same Page.

Make sure all your sub-contractors send invoices in one format and all invoices will be tailor made for your end customer! No extra work needed!

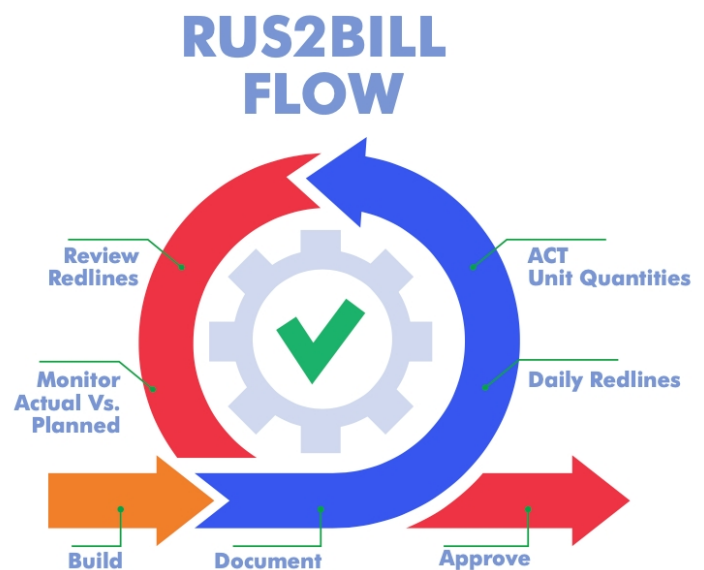

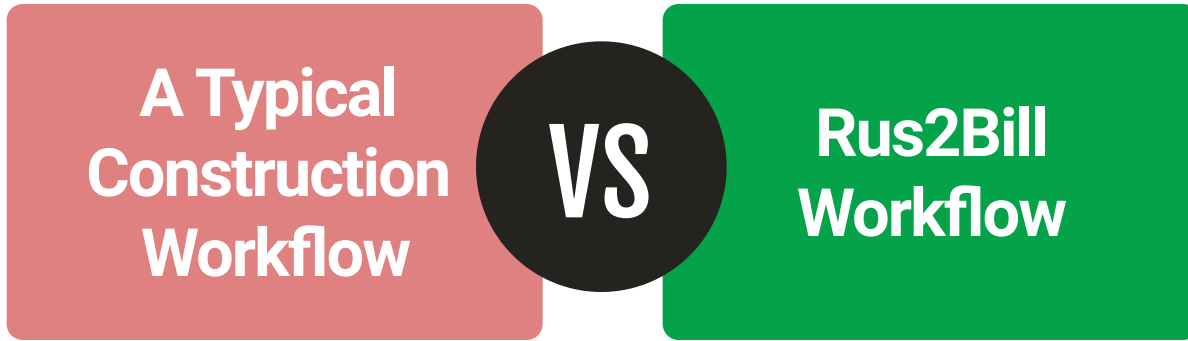

Billing has never been more convenient! Download your completed unit totals from the field at any time with Redline backups and INVOICE your customer. Boom. Done.

## Stay Ahead Of Change.

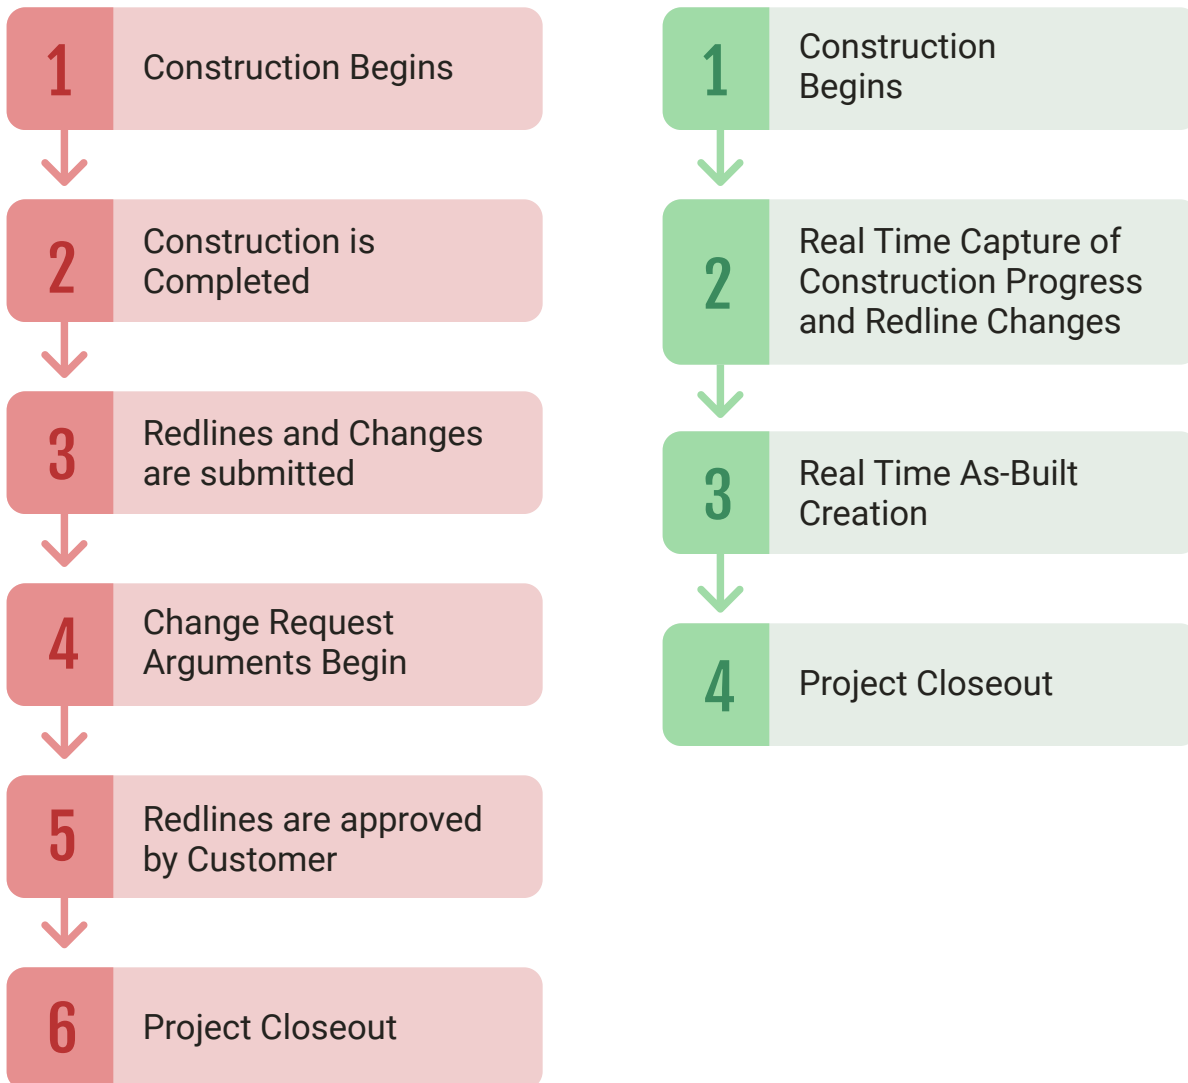

As work is completed, you will be able to monitor project changes, and take action to amend or approve contracts.

Eliminate unforeseen costs and delayed revenues by monitoring project changes in real time.

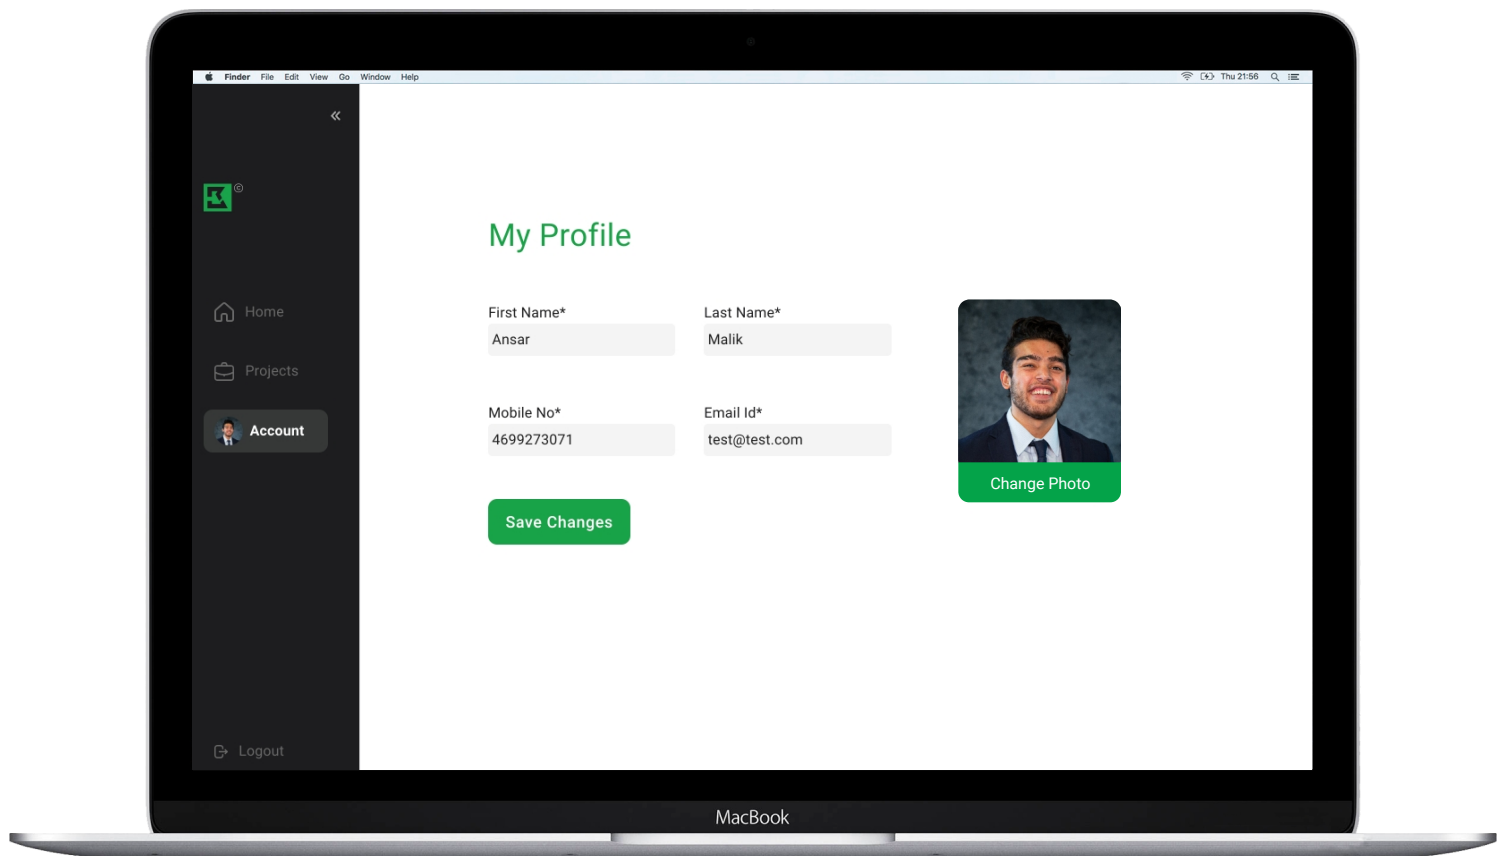

## Real Time Saves Time

# Automating Admins

Admins no longer need to mess with spreadsheet data creating unique reports or deciphering redlines that are impossible to read. RUS2BILL simplifies everything providing real time progress based on actual units completed, redlines, and reporting.

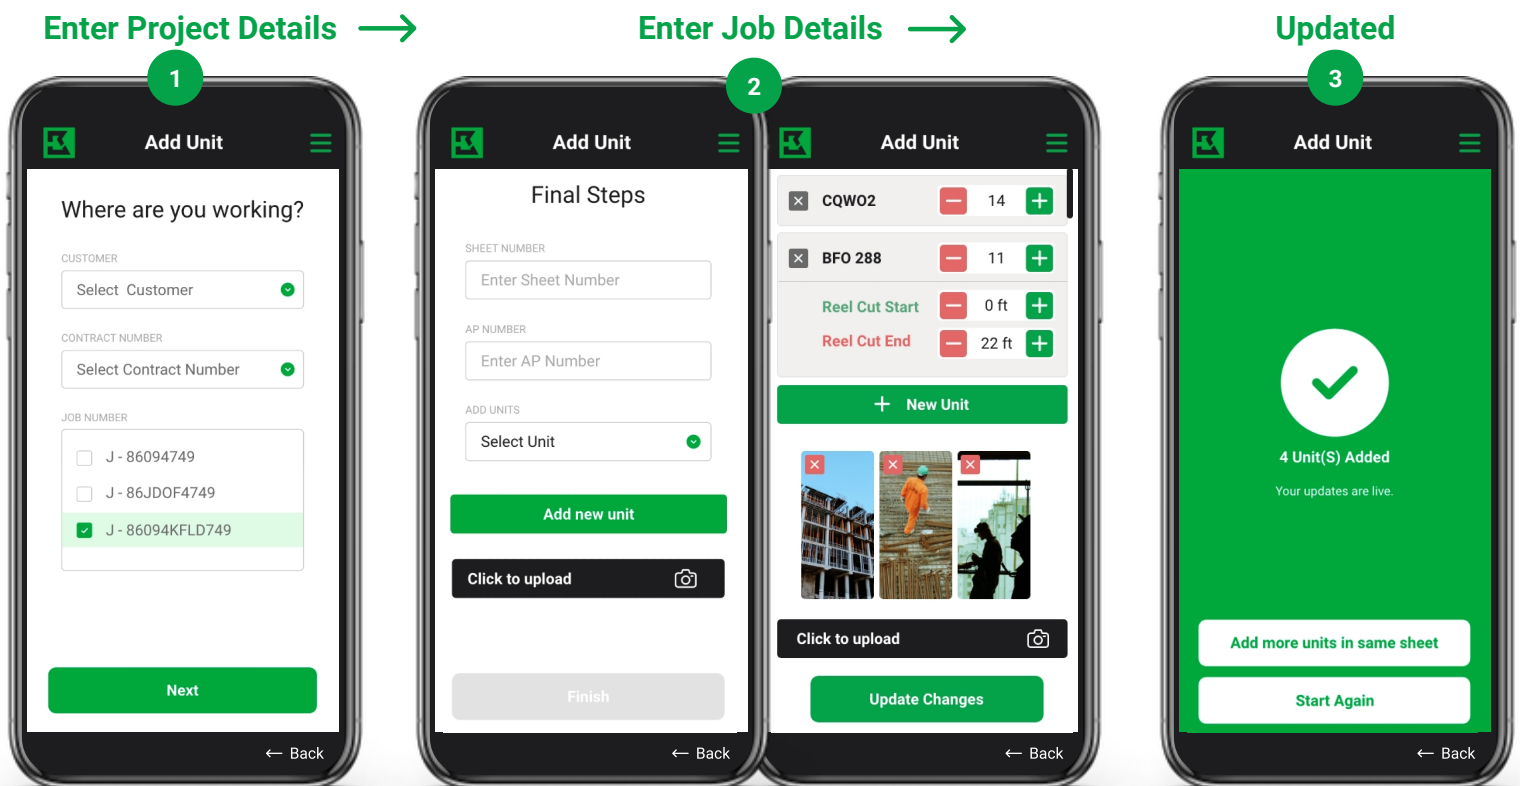

*“Do More With Less”*

# Simplifying Field Work

Field Workers Don't do Complicated — so we made it SUPER EASY. Field users only enter information they already have to document. In fact, the RUS2BILL helps users who are not familiar with RUS units with descriptions and suggestions of units to add.

*No Extras, Nothing New, Simple. Done.*

# Amplifying Inspection

Quality is king. Thus, RUS2BILL added an Inspection role to further ensure successful closeout and billing. Inspectors have an easy workflow to identify work completed and review that work to ensure it is compliant with specific customer Ways of Working.

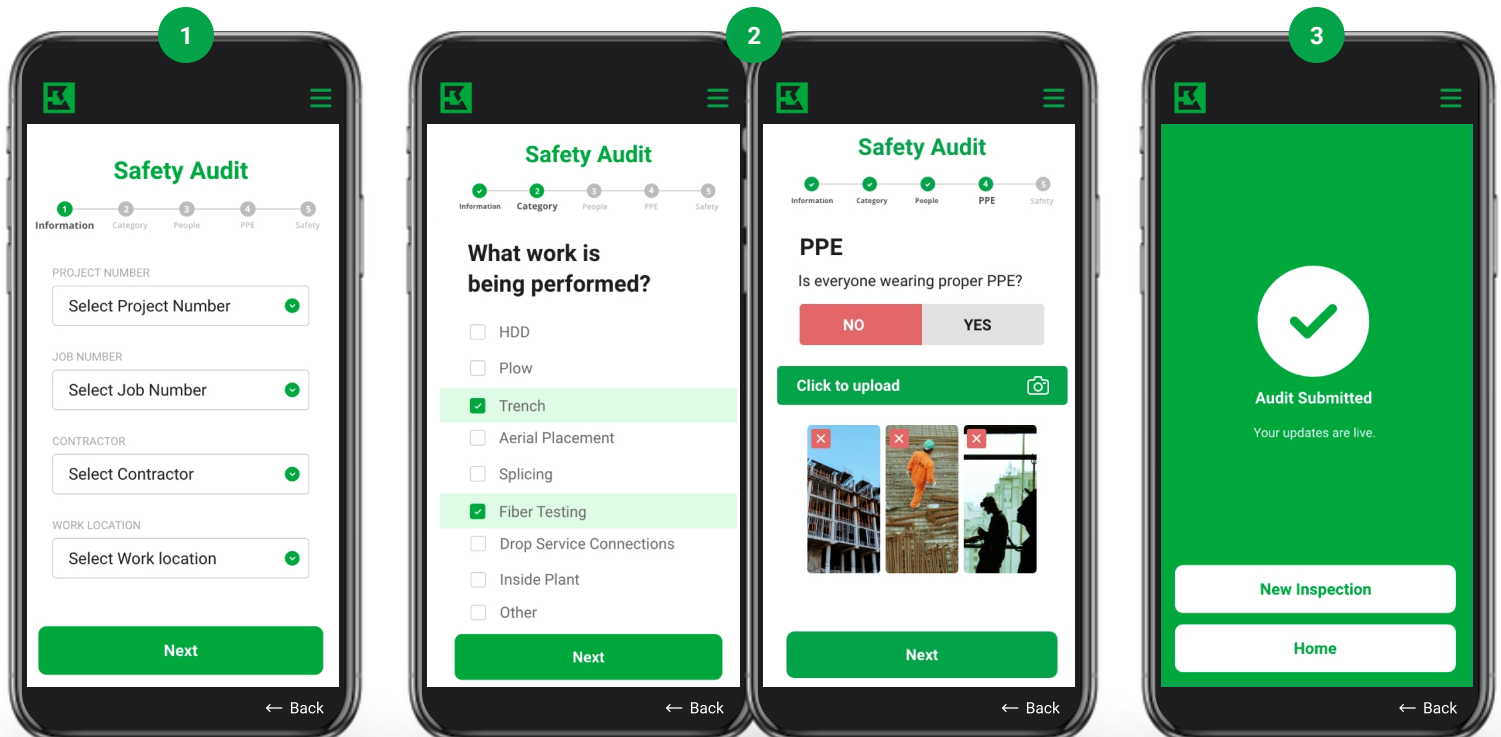

Safety is just as important. The Inspector role can also submit safety reports and document incidents. This is critical as the work in the field is sensitive. Rest assured, by amplifying your inspectors, you mitigate the risks of the business!

## Closing With Confidence
